PULSE

Every seat hears the talk.

Live captions, listen-in audio and a direct line to the room crew — from any phone.

Earbuds ready

THE PROBLEM

The back row is guessing.

Can't hear

The PA works at the front and disappears at the back. Nobody knows how many people missed it.

Can't see

Slides on a distant screen. Small text, glare and the wrong seat all look the same from the back.

No signal

Problems surface after the talk — if someone bothers to mention them at all.

Pulse closes the loop while the talk is still happening.

HOW IT WORKS

One QR code. Four steps.

1

Scan

Point a phone camera at the title slide.

2

Follow

Live captions and listen-in audio appear.

3

Signal

Tap “Speak up” or “Can't see the slides”.

4

Fix

The crew gets one ticket per issue, instantly.

No app install. No account. Votes are anonymous and expire after ten minutes.

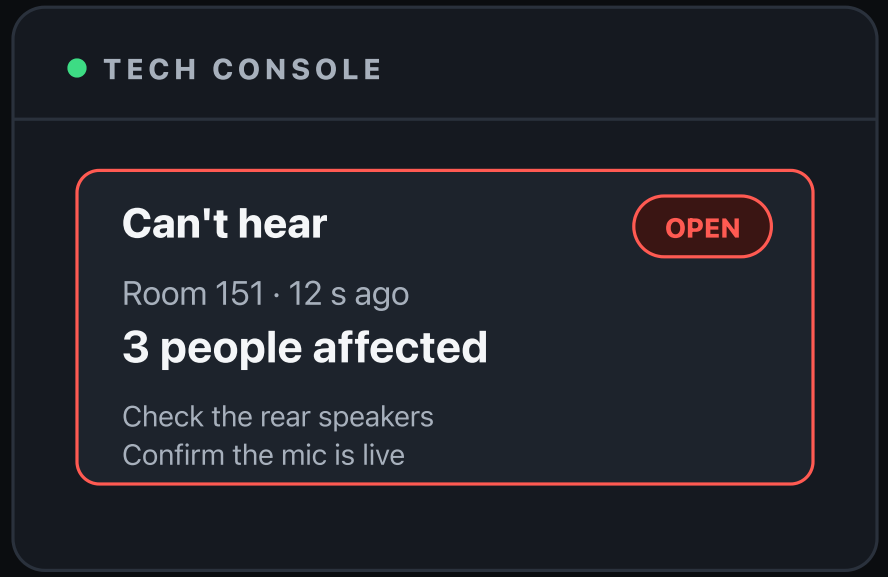

LIVE DEMO

Watch the room respond.

01 **Scan the title slide**
Join the room as an attendee.

02 **Speak into the mic**
Captions appear on every phone.

03 **Tap “Can't hear”**
A ticket opens on the technician console.

One vote is a signal. Three votes are a ticket.

TECH STACK

Small stack. Live path first.

Kubernetes + Radar

One pod, one replica. Deployed and watched from the Radar console.

Elastic

Captions, signals and questions indexed for search and the talk report.

Dash0

Traces and metrics on the live caption and audio path.

Gitar

Automated review on every pull request before it merges.

Node 20 · Express + ws · plain HTML and vanilla JS

Thank you.
